Interactive Design Offering and Sample Request

Now you can explore our designs through an interactive web interface that allows you to search, download, and order samples--all while browsing! Immerse yourself in a world of color and discover inspiration for your next project.

Fire Testing- What It Means For Your Project

Stonewood Panels have updated Fire Test results. Here is what you need to know:

- Class A fire rating: When tested to ASTM E84 standards, Stonewood Exterior Panels have a Flame Spread Index of 0, and Smoke Developed Value of 10- the highest performing phenolic cladding on the market.

- Stonewood 10mm Exterior Architectural Panels have received compliance certification for the NFPA 285 fire test.

- Remember, the NFPA 285 test is performed on a specific wall assembly, not a specific product. The test is performed on a two-story complete wall assembly.
